

# How to Enter New Lists of ODK Signs in the System

These steps are started in ITS4depot. Make sure you have access.

### **1. ODK Signs Lists**

- 1. Clone the database.
- 2. Download the XML/CSV files and edit them.
- 3. Upload the updated files to the cloned resource. The file names must be EXACTLY what they are or they won't be picked up.
  - a. It is recommended to have a MX4 available to test and download the files on, if you have never performed these tasks before.
- 4. Put the ODK sign codes in the bib\_destCodeMapManual.csv
  - a. For North Bay
    - i. All destinations are unique. We don't have to key on anything but the destination in the destCodeMap, so we use 2 columns instead of 5.
    - ii. Column format for North Bay:

###destinationName;signId

b. Column format in full:

###lineNumber;destinationName;destination2Name;viaName;signId

5. Configure the manual signs in the system in signdata.xml. Make sure the destination text matches exactly the destCodeMap.

bib_destCodeMapManual.csv - Notepad2	signata.xiii - Notepauz
